

# Keeler Slit Lamps

The classic slit lamp with a Keeler twist

KSL-H KSL-Z

The Keeler slit lamp has emerged as the newest product in our family, designed with you and your patients in mind. The KSL delivers a visually pleasing, customizable device using tried-and-tested optics and everything that the Keeler name stands for.

## Unparalleled optics

Keeler is renowned for market-leading optics and has been dedicated to optical design and manufacturing for over 100 years. This has allowed us to develop the best optics available on the market, resulting in striking clarity and precision with the KSL optical performance.

## Reliability

We understand how important the slit lamp is to your practice. Our exceptional attention to detail will ensure optimum performance and reliability time after time. With our manufacturing on-site, our technical assistance team and service is easily accessible to work with you.

## Make it your own

From slit lamp style to magnifications, digital capabilities, and accessories, you have the freedom and flexibility to customize your device to fit your needs.

## Get more out of your slit lamp

The KSL Digital and Digital Ready comes with many additional features outside the scope of the standard version. Additional features include a background illuminator, auxiliary diffuser, blue filter, camera/review control buttons and a selection of integrated cameras and beam splitters. Manage illumination and camera exposure from the base mounted buttons. Capture a perfect image using the joystick trigger for still photos or videos. External illumination can be controlled independently of the main illumination to ensure image contrast levels are optimized.

## Innovative software

We have been working hard to find software options that will improve diagnosis and image quality through different image capture and analysis programs. Efficiency and ease of use are crucial to keep up with high patient flow, therefore, we have hand-picked software packages to allow you to get the most out of your slit lamp. We are constantly striving to improve user experiences, so keep an eye out for new software packages that could be available in the future!
