

NAVIS–EX - Moving images from one Px file to another

Moving images from one Px file to another is useful if you happen to have accidentally saved scans to the incorrect Px. Effectively, the process is similar as if you were deleting files on a PC – you move files into and out of the recycle bin. To make this process easier, we suggest you periodically empty the recycle bin in NAVIS-EX.

First, select the Px file you wish to remove images from:

Fig.1 – Wrong Px file

R HAVE IX		<u> </u>					
Ello Edit Viaw Bogun Halp							1000
🖬 🧕 🙇 🧃	te Citore Reservat	New Edit OCTO		nard brew			
Leg Dra. From Men. 4	¥ 10 ******	Namo	(-) Oyear				
Sorbytam	Patient ID	Name	Age	Sex	Comment	History	Race
	в	CORRECT PARENT					
	A,	WRONG PATIENT	80yearOmonth	Male			Caucasian
	995959	Fundenburger Josh	20year3moreh	Wale			Otter
	999	NELSON MENDOZA	T.				
	90001	TEST , PATIENT	43yea@morth	Wala	This is a Test patient		Asian
	66643		Oyearl/month				
	562013	E K	Abyear 11 mionth	Wale			
	45155	folios us up folios:	Geardmonth	Main		Otaucorna	Other
	333	test wieconsin					

The image List screen appears. *Double-click* on the wrong patient in the patient list screen. Click the thumbnail image you want to move (The frame is highlighted green). Click '*Delete*' Button. Then the warning message appears. Click '*Yes*', and the images are moved to the NAVIS-EX recycle bin.

Next, return to the Px database and select the correct Px. Then click the '*Recycle*' button in the toolbar.

The NAVIS-EX recycle manager screen will then open:

Fig.3 – Recycle manager

Select the images you want to move (The frames are highlighted green). Confirm the Px use wish to move the images to is the details you can see listed. Click '*To Patient*'. Then warning message appears. Click '*Yes*'. Click 'Rreturn' or exit out of the recycle manager. The images will now have moved into the correct Px file.
